

ABOUT WILDBLUE.

What is WildBlue?

WildBlue uses the latest satellite technology to deliver two-way high-speed affordable Internet to your home or small office, virtually anywhere you are located. All you need is a WildBlue modem and mini-dish.

Where is WildBlue available?

Virtually anywhere in the continental United States.

How fast is the service?

Several packages are available, with download speeds between 512Kbps-1.5Mbps.

Is WildBlue expensive?

No. Starting at only \$49.95 per month for the Value Pak, the service is comparable to the cost of a dial-up account plus a second phone line. Equipment and installation fees are extra.

Do I need a phone line?

No. In fact, save your money and disconnect your second line.

Will I need a separate Internet Service Provider?

No. WildBlue includes standard features like e-mail and personal web space at no additional cost. If you like, you can keep your current ISP or AOL® service, although you must pay their fees separately.

How does WildBlue work?

WildBlue's proven state-of-the-art technology connects your home or small business computer to the Internet via our satellite using a WildBlue mini-dish and modem. It's that simple.

MINIMUM SYSTEM REQUIREMENTS

MICROSOFT WINDOWS: 98SE, NT 4.0, ME, 2000, XP / 300Mhz or faster / 128MB RAM / 100MB free disk space / Ethernet

MACINTOSH: OS9, OS10.2 or higher / 300Mhz or faster / 128MB RAM / 100MB free disk space / Ethernet
